Subject: Comment on the Eklutna River Draft Fish and Wildlife Program
Date: Saturday, February 17, 2024 5:47:05 PM

Dear Owners of The Eklutna Hydroelectric Project,

This comment is in regard to the Eklutna Hydroelectric Project's Draft Fish and Wildlife Program for the Eklutna River. I do not believe the plan's proposal to utilize the existing Anchorage Water and Wastewater Utility (AWWU) water supply infrastructure meets the needs of salmon, the vision of the Eklutna Peoples, or your legal obligation to reduce the project's impact on fish and wildlife. I support the Native Village of Eklutna's vision for river restoration and ask you to consider dam removal to fully reconnect the river and return the water flows needed to support the river's fisheries.

The current proposal leaves a mile of the river dry, releases only 3% of historical flows, and does not provide fish passage into the lake and upstream habitat. Salmon populations will only recover with a reliable and consistent water supply and access to crucial upstream spawning and rearing areas. This proposal is unacceptable and needs to go further to restore the river's salmon runs.

The Native Village of Eklutna has communicated its vision for thriving wild salmon in the Eklutna River; dam removal is the most effective way to achieve this important goal. I understand the reliance on this hydroelectric energy source in the near term. But removing the Eklutna Lake dam within the next decade, when replacement renewable energy is expected to be available, is reasonable.

It is important to be open to creative solutions that support the full return of the river. The resulting river and fish would mitigate the damage done by the dam while benefiting Alaskans. Maybe having hydrokinetic setups in the river could help generate supplemental electricity. Probably Anchorage water supply system should be protected before the release of the dam. Perhaps this is a good time to reduce our water use and waste. But now is defiantly your time to make this right. Please consider removing the Eklutna Dam so that all five species of salmon can once again return to the river.

Sincerely,
J Martin
